

# Custom AI Solutions

## Services

### Requirements Engineering

We help you understand your needs and formulate the specifications of your-tailor made AI solution.

### AI Consultancy

We offer guidance and strategic insights to leverage the full potential of AI.

### Machine/Deep Learning Development

We work with a broad spectrum of technologies, including but not limited to: **natural language processing, audio, computer vision, recommender systems, anomaly detection, generative models.**

### Development of web PoC

We offer a rapid proof of concept to demonstrate the power of the chosen solution.

### API Development

We deliver APIs ready to be seamlessly integrated into your system.

## Why work with us

### Experience

Our Data Science team has more than 10 years of experience working with Machine and Deep Learning technologies across industries.

### Domain Knowledge

Benefit from our in-depth understanding in the areas of healthcare, finance, on-demand delivery, judicial, logistics, education, culture and public administration.

### Social Impact

One of our values is AI for social good. We work with high ethic standards and engage in projects empowering positive change through innovative solutions.

### Semantic Search Engine

Enhance search experiences delivering relevant results based on context and user intent.

# Selected Projects

## Information extraction from documents for Smart Layers

Extraction of key information from structured and semi structured documents using visual transformers and language models.

## Dialog to Cart for Converse Now

System designed to translate a dialog between a user and a chatbot into a structured order of purchased items.

## AymurAI in collaboration with DataGenero

Open Justice project. System built to extract critical information about gender violence on court resolutions.

## Automated indexing for the Stadtmuseum Berlin

System for cataloguing audiovisual collections. Using semantic search and generative large language models.
